PROFESSIONAL SUMMARY

Senior UX Lead and UX Architect with 16+ years of experience designing enterprise, B2B, and product-based applications, including 7+ years leading end-to-end UX for complex, data-intensive enterprise platforms. Specializes in UX strategy, UX architecture, information architecture, and interaction design for complex workflows, permission-based access, and high-density data views, turning business requirements and technical constraints into structured UX solutions.

Defines and evolves design systems, including design tokens, reusable components, UX guidelines, and interaction patterns. Designs responsive, mobile-supporting web experiences for enterprise platforms and for client and government websites. Brings a user-centered approach through client and end-user interviews earlier in career and, in enterprise product work, through requirements and workflow analysis, stakeholder and implementation-team feedback, and UX evaluations.

Partners with Product Managers, Product Owners, Business Analysts, Engineering, and QA from requirements and discovery through design, implementation, and UX review. Leads and mentors a small team of designers on design quality, priorities, and delivery. Also explores AI-assisted UX workflows and early AI product concepts, including AI administration and AI-assisted query creation experiences.

PORTFOLIO

danielkumarux.com

UX case studies covering enterprise applications, complex workflows, data management, UX architecture, design systems, and user-centered product design.

CORE COMPETENCIES

UX Strategy & Product Design: UX Strategy, Product Design, User-Centered Design, User Research, Information Architecture, User Flows, Journey Mapping, Wireframing, Interactive Prototyping, Interaction Design, Navigation Design

Research & Validation: Client and End-User Interviews, Requirements & Workflow Analysis, UX Evaluation, Usability Evaluation, Competitive Analysis, Design and Implementation Reviews

UX Architecture & Design Systems: Enterprise UX, UX Architecture, Design Systems, Design Tokens, Reusable Components, UX Guidelines, Interaction Patterns, Responsive Design, Accessibility (WCAG)

UX Leadership: UX Leadership, Team Mentoring, Work Allocation, Priority Setting, Performance Feedback, Stakeholder Management, Cross-functional Collaboration, Design Handoff

Tools: Figma (including Dev Mode), Balsamiq, Adobe XD, Adobe Photoshop, Adobe Illustrator, Miro, GitHub

Front-End / UI Technologies: HTML5, CSS3, JavaScript, jQuery, WordPress, Angular, PrimeNG, Tailwind CSS

AI-Assisted UX: Claude AI for UX analysis and review, design-system-based mockups, prototyping, and solution exploration

PROFESSIONAL EXPERIENCE

Senior UX Lead

Platform 3 Solutions | Feb 2019 – Sep 2026

UX Strategy, Architecture & Complex Workflows

- Lead end-to-end UX strategy and design for enterprise data management products, including a data archiving and governance platform, an ETL tool, and an internal billing system, covering data archiving, application retirement, ingestion, migration, rehydration, enterprise search, data lineage, chain of custody, metadata management, alerts, and administration.
- Translate business requirements and technical constraints, informed by UX evaluations and competitive analysis, into information architecture, user flows, Balsamiq wireframes, and high-fidelity Figma designs, including responsive views, and provide UX sign-off before build.
- Designed permission-based workflows, including approval workflows for sensitive actions and a Search Run and Export split so that export access follows user permissions.
- Explored card, dense-grid, and data-table layouts for search results and selected the data table for information density and row selection in data-heavy views.
- Moved data rehydration from a side panel to a dedicated page after technical constraints were identified in discussion with engineering.
- Redesigned the metadata entity screen based on client feedback relayed by the implementation team, and added an application count to a listing view based on implementation-team needs.
- Designed ETL capabilities including change data capture, flexible flat-file sources, cloud output storage, licence expiry alerts, and volume licensing, and co-authored the volume-licensing brief with the Business Analyst.
- Designed the dashboard and alert configuration for an internal billing and consumption system, with Warning and Critical thresholds and configurable recipients.
- Explored early AI product UX concepts, including administration controls for enabling or disabling AI capabilities, allocating AI tokens across users and teams, viewing token usage, limits and warnings, and managing access to AI capabilities.
- Designed AI-assisted Query Editor mockups exploring natural-language query generation, query preview, and actions to copy or insert generated query output into the workflow.

Design Systems & UX Quality

- Defined and evolved a 27-page UI guideline covering reusable components, interaction patterns, and usage standards, with a shared component approach that supports light and dark themes and keeps UX consistent across products.
- Design for an Angular, PrimeNG, and Tailwind CSS front end; provide specifications through Figma Dev Mode and review builds through GitHub pull-request UX review and post-build UX QA, resolving gaps with engineers; for example, replacing a long recipients list with an accordion to remove unnecessary scrolling.
- Specify accessibility in the design, including visual contrast, logical focus order, keyboard interaction, and accessible names for icon-only controls.

Collaboration & Leadership

- Analyze requirements and workflows with Product Managers, Product Owners, Business Analysts, Engineering, and QA, incorporate stakeholder and implementation-team feedback, and facilitate design walkthroughs, stakeholder demonstrations, and solutioning sessions.
- Conduct stakeholder and SME discussions with Product Managers, Product Owners, Business Analysts, domain experts, implementation teams, customer-facing teams, and support teams to build domain understanding, clarify requirements, and surface workflow pain points.

- Gather customer and end-user input through implementation and customer-facing teams, supplemented by direct customer interaction where access allows, and review support tickets, feature requests, and customer-reported issues to inform UX decisions.
- Validate designs through UX evaluation, design reviews, prototype walkthroughs, and feedback from stakeholders and representative users where available, iterating on workflows and interface details before implementation.
- Lead and mentor a small team of designers: allocate work, set priorities, run design reviews, and provide feedback and performance input to maintain UX quality and delivery.
- Use Claude AI within the UX workflow for UX analysis and review, design-system-based mockup creation, prototyping, and exploring and refining solution options, while retaining ownership of final design decisions.
- Use Figma Make for rapid prototyping and interface exploration, while retaining ownership of UX structure, interaction decisions, and final design direction.

Senior UI (UX) Developer

Onward Technologies | Oct 2018 – Jan 2019

- Supported the UI team with design reviews and UX recommendations, identifying usability issues, workflow gaps, and design inconsistencies in existing flows and screens.

Senior UI/UX Developer

Newt Global | Sep 2017 – Oct 2018

- Contributed to the UX modernization of IVAPP, an existing Verizon enterprise application, focused on improving workflows, information presentation, and usability.
- Analyzed existing workflows with Project Managers, engineering, QA, and Verizon stakeholders, and designed complex telecom workflows through user journeys, information structures, wireframes, high-fidelity mockups, and interactive prototypes, following Verizon's design standards and accessibility requirements.
- Reviewed implemented screens against approved designs, conducted UX evaluations and competitive analysis, and provided design guidance and mentoring to UX team members.

Senior UI (UX) Developer

Onward Group of Companies (Onward eServices & Technologies) | May 2010 – Sep 2017

- Conducted interviews with clients and end users to understand pain points and gather feedback, and used the findings to clarify requirements and improve UX solutions.
- Designed responsive, mobile-supporting websites and web applications, including Tamil Nadu government projects (LFAD, DISH, and an Election Commission web application), translating requirements from client workshops into user flows, wireframes, and UI designs that met accessibility and compliance requirements.
- Built interactive interfaces and websites using HTML, CSS, JavaScript, jQuery, and WordPress.

EDUCATION

M.Sc. Psychology (Pursuing, expected December 2026)

Alagappa University | 2025–2026

B.Sc. Psychology

Alagappa University | Jan 2022 – Dec 2024

B.M.S.

ISBM | 2014–2017

M.M.V. (Master in Multimedia Visualizer)

Apollo Colleges Group | 2008–2009
